

Save web articles from your browser and read them on
your e-ink device — no fuss.

This tool is a **three-step pipeline**. Each step hands off to the next. You only need to do the installation once — after that, the routine takes a couple of minutes.

① Select & Export

>

② Convert to EPUB

>

③ Send to Kindle

0

ONCE

Install the Chrome Extension

One-time setup — takes about two minutes.

Chrome, Edge, or Brave

- Type `chrome://extensions` in the address bar and press Enter.
- Flip the **Developer mode** toggle (top-right corner) to **ON**.
- Click **Load unpacked** and select the `KOREader Manager` folder you downloaded.
- The extension icon appears in your toolbar. Done!

Firefox

- Type `about:debugging#/runtime/this-firefox` in the address bar.
- Click **Load Temporary Add-on** and open the `manifest.json` inside the extension folder.

Firefox note: The extension resets when you close the browser. For everyday use, Chrome/Edge is recommended.

Pin it: Click the puzzle-piece  icon in Chrome's toolbar and hit **Pin** next to KOREader Manager so it's always one click away.

1

STEP

Select & Export Your Articles

Pick which bookmarks you want to read on your Kindle.

The extension shows all your browser bookmarks as a tidy, clickable list — including folders. You tick what you want, then export.

1

Open the extension

Click the KOREader Manager icon in your toolbar. The **Bookmarks** tab opens by default, showing all your bookmark folders.

2

Select what you want to read

Tick individual article links, or click a folder name to select everything inside it at once. You can also hit **Send Current Tab** to instantly add the page you're currently viewing.

3

Click "Export Selected"

A file called `urls.csv` is saved automatically to your **Downloads** folder. That's the handoff to the next step.

You can run this as often as you like throughout the week, adding new articles as you find them. The converter in Step 2 will pick them all up at once.

2

STEP

Convert Articles to EPUB

Turn those URLs into real book files — automatically.

The converter program reads the `urls.csv` file, downloads each article (including images), and turns them into EPUB files ready for your Kindle.

1

Double-click "Article to Ebook Converter.exe"

That's the only thing you need to do. It finds the `urls.csv` automatically.

Windows security warning?

Click *More info* → *Run anyway*. This is normal for programs not from the Microsoft Store.

2

Watch the progress

A small window shows each article being processed. A  means success; a  means that site couldn't be downloaded (paywalls, for example — other articles still convert fine).

3

Your EPUBs are ready

When finished, the tool opens the output folder automatically — it's `Downloads/EPUBS`. The `urls.csv` file is deleted to keep things tidy.

3

STEP

Send Files to Your Kindle

Copy your books wirelessly — no cables needed.

The extension's second tab, **Kindle Finder**, locates your Kindle on the Wi-Fi network and opens its file browser right in Chrome, so you can drag files straight in.

1

Prepare your Kindle

On your Kindle, open KOREader and launch the **File Browser**.
. Your computer and Kindle must both be on the same Wi-Fi network.

2

Scan for your Kindle

Click the extension icon, go to the **Kindle Finder** tab, and hit **Scan Network**.
. The extension searches your local network automatically.

Can't find it? Check KOREader → Settings → Network → Network Info → IP and type that address manually into the extension's IP field.

3

Drag and drop your EPUBs

Once found, click **Open Files**.
. Your Kindle's folder appears in the browser — drag the EPUB files from the `Downloads/EPUBS` folder straight into it.

4

Open KOREader and read!

The books appear in KOREader's library immediately. Next time, skip the scan — just click **Open Files** directly.

Prefer a cable? Connect your Kindle via USB, open its drive, and copy EPUBs into `files/mnt/us/koreader/HOME/Books`. Then open KOREader to see them.
